PAPER FACED METAL TRIMS

GIB® GOLDLINE®

Excellent for creating a sharp corner finish. These trims are bedded in with jointing compound. They are not mechanically attached to the frame structure and thus less susceptible to cracking due to frame movement. The paper face matches the GIB® plasterboard paper face for a great uniform and robust finish.

PAPER FACED COMPOSITE TRIMS

Flexible reinforced corner trims, cut to length and suitable for internal and external corners (ie any corner angle between 90 to 270 degrees; for example, angles found at intersections in raking ceilings). Embedded with compound and with a paper finish to match the GIB® plasterboard paper finish. GIB® UltraFlex® has a high impact resistance and thus is ideal for exposed corners such as on nib walls.
